

BEN COLLINS “The man in the White Suit”

Recently Ben has published his autobiography called “The man in the White Suit” where he admits he was indeed the STIG on BBCs Top Gear from 2002-2010. Ben has been using the **CG-Lock** for his lap times in all the cars he drove to the limits on the Top Gear track.

Ben is one of the UKs top professional racing drivers having taken part in one of three Ascari KZ1R Supercars in the FIA GT3 European Championship with Team Damax. More recently Ben has been working with **Gary Powell** on several big movies including the 007 Bond movie, “Quantum of Solace”. Ben has been using the **CG-Lock** for years for his stunt work and in his regular road car.

*“The **CG-Lock** is a great little device which turns a normal seat belt into a racing harness, simply by tightening the lap belt and holding your body in position. We use it for driving on track, for filming and for precision stunt driving sequences but there are numerous advantages to using it day-to-day.*”

*“Driving on the race track, the first crucial step is establishing a good seating position and with a conventional seatbelt you just keep falling out of it, unless you install a full harness or fit a **CG-Lock**. Sliding forwards or laterally in the seat when driving isn’t just frustrating, it’s also dangerous. In the event of a sudden avoidance reaction, hard braking or a collision, the lack of movement from use of the **CG-Lock** can make all the difference in avoiding injury. The **CG-Lock** connects the driver to the car and holds you in the seat allowing heightened feedback from the tyres so that the driver can make the subtle inputs into the steering wheel, accelerator and brake that make the difference between posting an average lap time and a fast lap time.”*

*“The **CG-Lock** is a great piece of kit... it really helps the driver maintain control of the car...”*

The CG-Lock has been a major contributor to over 30 reported crash survivors.

Ben Collins, top stunt driver behind the scenes during the Nicholas Cage Blockbuster movie “National Treasure II - Book of Secrets” where the **CG-Lock helped with the inch perfect driving scenes.**
