Bruce Mather

CG-Lock

50 Slashpine Circle

Hockessin, Delaware, 19707

Dear Bruce,

I am writing you today to thank you again for the CG-Lock samples. We equipped them to our 2005 Dodge Durango and let our team have at it. Our team deals in High Risk entry for State and Federal fugitive recovery as well as Executive Protection. We were extremely impressed with how well it kept us secured in our seats.

We put the CG-Lock through the EVOC course, high speed maneuvers, and off road. The drivers all had the same thing to say: during high speed maneuvers with the CG-Lock, once cinching the belt, you were secure thus allowing yourself to concentrate on using the steering wheel to control the vehicle verses using the steering wheel to stabilize yourself while also trying to control the vehicle, which we all know is a safety risk.

Myself and the team decided to put the CG-Lock to our own tests by equipping an old salvage car with the CG-Lock and then purposely rolling the vehicle to see if it really would stand up to its name. Once again, we were thrilled with the results; while upside down the driver was secured in the correct seated position but was able to quickly remove himself from the belt using the release switch.

We all now have CG-Lock's in our own private vehicles as well and are very satisfied with the results that they provide on a daily basis. When purchasing new company vehicles there is no doubt that they will all be equipped with the CG-Lock system. This is one product that provides as all with peace of mind, knowing that it will always perform to its expectations, and because of this we not only stand behind it 100% but will recommend it to all colleges and clients whom might benefit from the CG-Lock.

Sincerely,

Michael D. Sanchez

President
